47. A fluid flowing steadily in a circular pipe of radius R has a velocity that is everywhere parallel to the axis (centerline) of the pipe. The velocity distribution along the radial direction is $V_r = U\left(1 - \dfrac{r^2}{R^2}\right)$, where r is the radial distance as measured from the pipe axis and U is the maximum velocity at r =0. The average velocity of the fluid in the pipe is

(A) $\dfrac{U}{4}$

(B) $\dfrac{U}{2}$

(C) $\dfrac{U}{3}$

(D) $\left(\dfrac{5}{6}\right)U$

Key: (B)

Given, $\quad V_r = U\left(1 - \dfrac{r^2}{R^2}\right)$

$Q = \int V_r . dA = \int_0^R U\left(1 - \dfrac{r^2}{R^2}\right) 2\pi r dr$

$Q = \dfrac{2\pi U}{R^2}\left(\dfrac{R^2 r^2}{2} - \dfrac{r^4}{4}\right)\Bigg|_0^R = \dfrac{\pi}{2} UR^2$

$\overline{V} = \dfrac{Q}{A} = \dfrac{\dfrac{\pi}{2} UR^2}{\pi R^2} = \dfrac{U}{2}$

48. The liquid forms of particulate air pollutants are

    (A) fly ash and fumes   (B) dust and mist

    (C) mist and spray   (D) smoke and spray

Key: (C)

Sol: The liquid forms of particulate air pollutants are mist and spray.

Note: Mist is a cloud made of very small drops of water in the air just above the ground which reduces the visibility.

49. The value $\int_0^1 \left(e^x dx\right)$ using the trapezoidal rule with four equal subintervals is

    (A) 2.192   (B) 718   (C) 1.727   (D) 2.718

Key: (C)

$$f(x) = e^x, a = 0, b = 1, n = 4 \Rightarrow h = \frac{b-a}{n} = 0.25$$

$$y_0 = f(a) = e^0 = 1; \, y_1 = f(a+h) = e^{0.25} = 1.284$$

$$y_2 = f(a+2h) = e^{0.5} = 1.648; \, y_3 = f(a+3h) = e^{0.75} = 2.117$$

$$y_4(a+4h) = e^1 = 2.718$$

$$\therefore \text{By Trapezoidal rule, } \int_0^1 e^x dx = \frac{h}{2}\left[(y_0 + y_4) + 2(y_1 + y_2 + y_3)\right]$$

$$= \frac{1}{8}\left[(1 + 2.718) + 2(1.284 + 1.648 + 2.117)\right] \simeq 1.727$$

50. Which one of the following statements is correct?

    (A) Combustion is an exothermic process, which takes place in the absence of oxygen

    (B) Pyrolysis is an exothermic process, which takes place in the absence of oxygen

    (C) Combustion is an endothermic process, which takes place in the abundance of oxygen

    (D) Pyrolysis is an endothermic process, which takes place in the absence of oxygen.

Key: (D)

Sol: Pyrolysis is an exothermic process as there is a substantial heat ???? to raise the biomass to the reaction temperature.

51. The equation of deformation is derived to be $y = x^2 - xL$ for a beam shown in the figure.
The curvature of the beam at the mid-span (in units in integer) will be _____.

Key: (2)

**Sol:** Curvature is $\dfrac{d^2y}{dx^2}$

Given equation

$y = x^2 - xL$

$\dfrac{dy}{dx} = 2x - L$

$\boxed{\dfrac{d^2y}{dx^2} = 2}$

The beam is having constant curvature throughout the beam.

52. An unsupported slope of height 15m is shown in the figure (not to scale), in which the slope face makes an angle 50° with the horizontal.

The slope material comprises purely cohesive soil having undrained cohesion 75kPa. A trial slip circle KLM, with a radius 25m, passes through the crest and toe of the slope and it subtends an angle 60° at its center O. The weight of the active soil mass (W, bounded by KLMN) is 2500 kN/m, which is acting at a horizontal distance of 10m from the toe of the slope. Consider the water table to be present at a very large depth from the ground surface.

Considering the trial slip circle KLM, the factor of safety against the failure of slope under undrained condition (rounded off to two decimal places) is _____.

Key: (1.96)

**Sol:** $FOS = \dfrac{\text{Resisting moment}}{\text{Actuating moment}}$

$FOS = \dfrac{C_u IR}{w\bar{x}}$

$\ell = $ length of ac KLM

$\bar{x} = $ Dis tance of 'w' from toe

$\Rightarrow FOS = \dfrac{75 \times 2\pi \times 25 \times \dfrac{60}{36} \times 25}{2500 \times 100} \Rightarrow FOS = 1.96$
